## Claim Objections

1. Claims 4-14 are objected to under 37 CFR 1.75(c) as being in improper form because a multiple dependent claims, for example, claim 4 is a multiple dependent claim, depend to claim 1 or 2 or 3 cannot depend on a multiple dependent claim 3 which depends to claim 1 or 2. See MPEP § 608.01(n). Accordingly, the claims 4-14 not been further treated on the merits.

#### **Drawings**

2. The drawings are objected to because the drawings need to be labeled properly. Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. The figure or figure number of an amended drawing should not be labeled as "amended." If a drawing figure is to be canceled, the appropriate figure must be removed from the replacement sheet, and where necessary, the remaining figures must be renumbered and appropriate changes made to the brief description of the several views of the drawings for consistency. Additional replacement sheets may be necessary to show the renumbering of the remaining figures. Each drawing sheet submitted after the filing date of an application must be labeled in the top margin as either "Replacement Sheet" or "New Sheet" pursuant to 37 CFR 1.121(d). If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

Application/Control Number: 10/511,812

Art Unit: 2656

### Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.
- 4. Claims 1-3 are rejected under 35 U.S.C. 102(e) as being anticipated by Nakajima et al. (US 2001/0006500).

Regarding claim 1, see Fig. 1 discloses a device for recording data on a recording medium which can be written by a recording head unit which produces a recording energy beam, the device comprising: a control assembly for controlling the intensity of the recording beam (see Fig. 1, elements 39, 40, 42 and [0073]), a set of measures for supplying control data to said control assembly comprising a measuring circuit for measuring the quality of the recorded signals (see Figs. 1, elements 37-38 [0005], [0022]), a database relating to the medium for supplying previous data to said control assembly (see Fig. 1, elements 39, 41 and [0064], [0073] the recording parameters), characterized in that the set of measures comprises additional measuring circuits of the recorded signal (see Fig. 2).

Regarding claim 2, see Fig. 16 discloses device as claimed in claim 1, characterized in that at least one of the measuring circuit determines parameters through measurements from real-time recording conditions (see [0008] and [0108]).

Regarding claim 3, see Fig. 2 discloses a device as claimed in claim 1 or 2, characterized in that at least one of the measuring circuits is a jitter measuring circuit (see abstract).

Art Unit: 2656

#### Cited References

5. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

The cited references relate to

- a. Asymmetry detection apparatus jitter detection apparatus and recording/reproduction apparatus (Nakajima et al. US 2001/0006500).
- b. The jitter detection circuit measures a jitter amount as the quality of the reproduced signal (Furukawa et al US 2005/0201228).
- c. Optical recording method performing power control with variable linear velocity (Nakajo US 2002/0181365).
- 6. Any inquiry concerning this communication or earlier communications from the examiner should be directed to VAN T. PHAM whose telephone number is 571-272-7590. The examiner can normally be reached on Monday-Friday.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Wayne Young can be reached on 571-272-7582. The fax phone number for the organization where this application or proceeding is assigned is 571-272-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
